SUMMARY

Final-year Computer Science Engineering student (Expected Graduation: May 2027) with hands-on experience building full-stack applications using Java, Python, JavaScript, React.js, TypeScript, and Node.js. Experienced in REST APIs, AI integration, real-time systems, databases, and cloud deployment, with a strong foundation in DSA, OOP, DBMS, Operating Systems, and Computer Networks.

EDUCATION

Visvesvaraya Technological University *2023 – 2027*
Bachelor of Engineering in Computer Science and Engineering **Bengaluru, India**

PROJECT EXPERIENCE

ServiceHub — Intelligent Home Services Marketplace *2026*
React, Node.js, Express.js, MongoDB, Mongoose, Firebase, Redis, BullMQ, Tailwind CSS
GitHub — Live Demo

- Developed a full-stack home-services marketplace that manages the complete service lifecycle including **service discovery, technician profiles, customer requests, quotations, bookings, payments, invoices, notifications, warranties, and reviews** through role-based customer, technician, and admin workflows.
- Designed modular **Express.js REST APIs** with separated controllers, routes, models, middleware, and service layers using MongoDB/Mongoose, incorporating authentication, request validation, rate limiting, Helmet security, file uploads, and protected role-based endpoints.
- Implemented **Redis and BullMQ** for asynchronous background processing, automated booking workflows and notifications, along with PDFKit-based invoice generation and a modular payment-provider architecture supporting demo payments and future payment integration.

DineSetu — Intelligent Digital Dining & Table Management *2026*
React, TypeScript, Vite, Tailwind CSS, Socket.IO, React Query,MongoDb,Node.js,Express.js
GitHub — Live Demo

- Developed a modern **QR-based digital dining system** enabling customers to access menus without an app, collaborate on shared table carts, place orders, and receive real-time order updates through a responsive restaurant interface.
- Implemented **real-time table intelligence and restaurant operations** including floor-wise table management, live order streams, multi-station kitchen workflows, shared ordering, course-based dining, and synchronized customer/manager experiences using Socket.IO.
- Built intelligent dining assistance features including **AI-assisted food discovery, dietary guidance, spice recommendations, food pairing, and personalized item selection**, improving customer decision-making beyond a traditional QR menu.

VeriCrypt — Secure File Sharing & Integrity Verification *2026*
React, TypeScript, Node.js, Express.js, MongoDB, AES, RSA, JWT
GitHub

- Built a full-stack secure file-sharing platform implementing a **hybrid cryptographic architecture**, using AES-256-GCM for file encryption and RSA-OAEP for secure session-key protection rather than inefficiently encrypting large files directly with RSA.
- Developed defense-in-depth security controls including **JWT authentication, bcrypt password hashing, role-based authorization, PBKDF2-protected private keys, file expiration, encrypted storage, security audit logging, and protected API routes**.
- Added a controlled **ciphertext tampering simulation** and automated cryptographic tests to demonstrate authentication-tag failures, signature verification failures, unauthorized access detection, and download blocking.

CampusFlow – AI-Enhanced Placement Management System *2026*
React, JavaScript, Node.js, Express.js, MongoDB, JWT, Tailwind CSS
GitHub | Live Demo

- Developed a full-stack placement management platform for centralizing student records, placement drives, eligibility verification, job applications, and recruitment workflows for a college placement cell.
- Implemented role-based dashboards and secure JWT authentication for students and placement administrators, with academic profile management, session-wise student records, and automated eligibility checks based on placement criteria.
- Built placement drive management, targeted notifications, email reminders, and application tracking workflows to streamline communication between students and the Training and Placement Office (TPO).

TECHNICAL SKILLS

Programming Languages:	Java, C, Python, JavaScript
Frontend:	HTML, CSS, React.js
Databases:	SQL, MongoDB
Tools & Platforms:	Git, GitHub, VS Code, Firebase, Vercel, Figma
Core CS:	DSA, OOPS, DBMS, Operating Systems, Computer Networks, Software Engineering
Soft Skills:	Problem Solving, Team Collaboration, Communication, Agile Methodology

CERTIFICATIONS

- **GeeksforGeeks GFG 160 Certification** – Certificate
- **Machine Learning Specialization** – Stanford University & DeepLearning.AI Certificate

ACHIEVEMENTS

- Solved **200+ Data Structures and Algorithms problems** across LeetCode and Codolio.
